PROBLEM STATEMENT

Finding verified designers and personalized interior designs is challenging. Existing platforms lack seamless designer-client collaboration and customization. **Style Spacing** bridges this gap by offering **room-specific designs, designer listings, and tailored styling**. Our platform ensures a seamless experience for both clients and designers.

DESCRIPTION

The interior design industry lacks a **centralized platform** for verified designers and personalized styling. Clients struggle to find **trusted professionals** and explore **room-specific designs** tailored to their needs. Designers face challenges in **showcasing their work and connecting with potential clients**. Existing platforms offer **limited customization and fragmented services**, making collaboration difficult. **Style Spacing bridges this gap** by providing a **one-stop solution** for seamless designer-client interaction, tailored designs, and enhanced accessibility.

TECHNOLOGIES USED:

HTML (HyperText Markup Language)

- Defines the **structure** of web pages, such as headers, sections, and navigation.
- Creates the layout for **room-specific designs, designer profiles, and customization options.**
- Forms are used for **user sign-ups, designer registrations, and contact requests.**

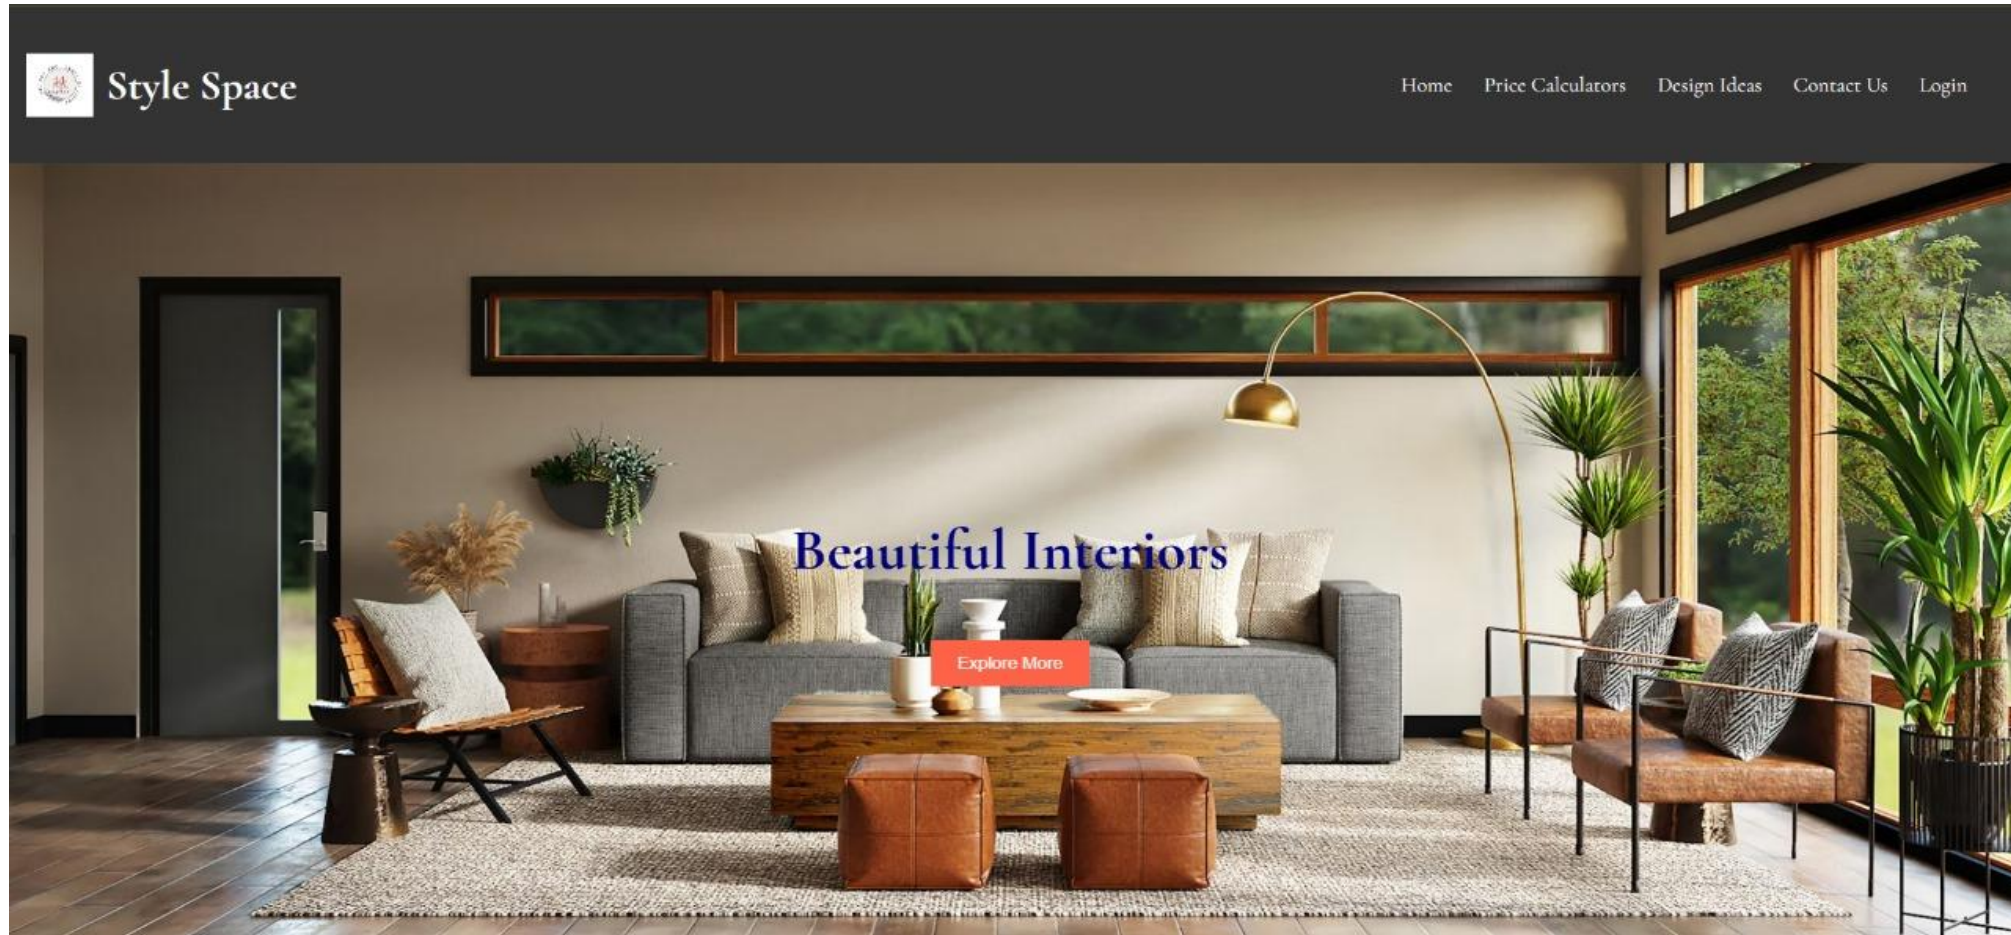

CSS (Cascading Style Sheets)

- Enhances the **visual design** by styling elements like fonts, colors, and layouts.
- Implements a **modern and UI**, ensuring a smooth experience across devices.
- Provides **grid and flexbox layouts** for displaying designer portfolios and design inspirations attractively.

JavaScript (JS)

- Adds **interactivity** and enhances user experience.
- Enables **dynamic filtering and searching** of room designs and designer profiles.
- Handles **form validation, interactive galleries, and animations** for smooth navigation.

HOW ANGULAR JS IS INCORPORATED IN STYLESPACE

- 1.Component-Based Architecture** – AngularJS enables a modular approach, making it easy to manage different sections like room designs, designer listings, and user dashboards.
 - 2.Dynamic Data Binding** – Ensures real-time updates, allowing users to instantly see changes in design recommendations, filters, and selections.
 - 3.Single Page Application (SPA)** – Enhances user experience with smooth navigation, reducing page reloads while exploring designs or contacting designers.
 - 4.REST API Integration** – Fetches and displays designer profiles, user preferences, and design data efficiently from the backend.
 - 5.Form Handling & Validation** – Ensures seamless user registration, login, and custom design requests with real-time validation and error handling.
-
